IHP
**Commercial
Industrial
Catalog**
Century® II

*A. O. Smith
offers a full line of Epact
and NEMA Premium
TEFC and ODP motors
up through 400 HP.*

*Our Speed Engineered®
inverter-duty motors offer
the “Corona-Free”
solution for people
using motors with drives.
We’ve designed, built,
and tested our Speed
Engineered motors for
superior motor drive
compatibility.*

*Add our commercial
industrial sales team and
an exceptionally strong
independent distribution
network, and we will help
you get the job done.*

ACSmith

has what your customers need to run smoothly...

**Selection
Quality
Delivery
Value**

Direct OEM Replacements for:

Carrier, Trane, York, and others.

What you'll find in this catalog....

EPlus®/EPlus[®]3

The industry's premier energy-efficient motor.

The very first line of high efficiency motors was introduced by A. O. Smith in the mid-1970's. It was promoted as a product that paid for itself through reduced operating costs and sold under the brand name E-Plus®.

As the leader in energy efficient motors, A. O. Smith is proud to introduce our new full line of Century® II E-Plus® and E-Plus[®]3 ODP and TEFC motors. Like E-Plus® and E-Plus[®]3 all Century® II E-Plus® and E-Plus[®]3 motors can be used with variable frequency drives (VFD's)

Century® II E-Plus® motors meet the efficiency standards established by the Energy Policy Act of 1992 (EPACT).

Century® II E-Plus[®]3 motors meet the efficiency standards set for NEMA PREMIUM in 2001 and as a result meet the efficiency standards mandated by the Energy Independence and Security Act of 2007 (EISA).

If you're looking for higher operating performance and lower energy bills then Century® II E-Plus[®]3 is your **BEST** choice for a high efficiency motor.

New Century® II stock ratings are constantly being added to our inventories, both at our distribution centers and through your local A. O. Smith distributors. Be sure to check out our new Century® II models by looking for models designated with a NEW symbol.

The industry's corona-free inverter motor.

Speed Engineered®: The industry's corona-free inverter-duty motor. It's not just the wire. It's a motor system designed for compatibility with today's high tech IGBT variable frequency drives.

A. O. Smith designs, builds, tests and warrants these motors to be corona-free.

You can specify Speed Engineered® with confidence knowing they'll perform reliably on the job, over the long haul. Our research and development has overwhelmingly concluded that **it's not just the wire**, but a fully protected, "**corona-free**" insulation system that eliminates all the threats that can cause premature motor failure. Speed Engineered® motors are rated for 4:1 speed ratio at constant torque or 6:1 at variable torque. They are identified in this catalog with a special symbol . Look for them!

Speed Engineered® Motors

Motors specially designed, tested and warranted to be **Corona-Free** for compatible inverter duty are marked in this catalog with a

E-Plus®
Speed Engineered®

Why Specify Speed Engineered® Inverter Duty Motors?

Variable frequency drives (VFDs), while offering advantages of greater control and energy savings to commercial and industrial motor users, can also cause premature winding failure in motors not designed specifically for inverter duty. Now A. O. Smith engineers have developed a solid solution...Speed Engineered®.

Speed Engineered® is a special motor design and construction that eliminates the destructive forces that can occur when motors are applied with drives. The Speed Engineered® "Corona-Free" solution eliminates the causes of premature winding failure completely.

All Speed Engineered® motors meet or exceed NEMA MG1-31 performance standards, in addition to carrying A. O. Smith's Speed Engineered® warranty for inverter duty applications.

The Causes of Premature Motor Failure

Research we conducted identified why motors can fail when used with variable frequency drives under certain operating conditions. The results were published in a white paper, *The Simple Truth About Motor/Drive Compatibility*, which is available from A. O. Smith. Our findings revealed that "corona" as well as other potential hazards, can materialize and eventually damage motors applied with a drive.

What is Corona?

VFDs create high voltage pulses at the motor, especially when the motor and drive are separated by long power leads. Those high voltage pulses (or voltage spikes) develop voltage potential between adjacent conductors in the motor winding.

When the voltage generated in the air between the conductors is high enough, the air breaks down.

This breakdown is known as "corona." The discharge that is created forms ozone, which causes the motor's magnet wire insulation to disintegrate, causing premature failure.

This phenomenon has been around for a long time and effects a limited number of earlier vintage motor/drive applications. But with drives becoming more sophisticated, inverter switching rates increasing and the percentage of motors operating with drives growing rapidly, incidents of downtime are also growing and corona is now getting a lot of attention in the motor/drive industry.

There are several techniques employed in the market to increase motor tolerance to corona. Although simpler and less costly, these practices are not always effective since corona is not cured...only bandaged. The only way to be sure the destructive efforts of corona will not compromise your motor/drive application is to eliminate corona altogether. This is easily accomplished by specifying A. O. Smith Speed Engineered® motors on your next project.

What Makes Corona-Free Speed Engineered® Motors Best For Motor-Drive Compatibility?

There are several solutions to the problem of motor insulation stress caused by inverters. Rather than just squelching the voltage overshoot which leads to corona, as mentioned earlier, the preferred method and the approach used by A. O. Smith is to design the motor to be corona free at expected peak voltage. We begin with a design premise of understanding the magnet wire corona inception voltage (CIV) and distribution of voltage in the motor.

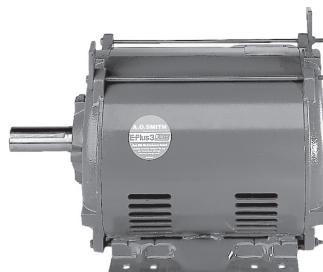

From that, our design approach becomes simply to:

Choose a winding layout that minimizes the proximity voltage differences and reliably positions insulation materials to improve dielectrics above the threshold of corona...

You may recognize this as the design approach for any motor, regardless if it is line operated or driven by an inverter. The difference is that with an inverter you must anticipate a much higher peak voltage and the rapid rise times of these potentially harmful pulses.

At A. O. Smith, we build a motor able to withstand voltage peaks 3.5 times what is stated on the motor nameplate. Therefore we design additional insulation (tape, sleeving, phase paper, etc.) and strategically locate this added insulation in a manner that will yield the necessary protection against the high voltage pulses that may occur between magnet wire strands. This approach yields the desired design integrity.

With the design for insulation and winding layout determined, the success of each motor now depends on placing the insulation properly during production. To provide final assurance for our customers, A. O. Smith uses a proprietary CIV tester that employs a unique procedure to detect and measure corona for each and every Speed Engineered motor we produce...before that motor leaves our factory!

E-Plus®3
Speed Engineered®

Because Motor/Drive Applications are so Varied, A. O. Smith Offers Three Distinct Families of Speed Engineered® Motors

E-Plus®, the industry's first high efficiency, energy-saving motor, meets 1997 EPACT standards. Now, E-Plus® also carries the protection of the Speed Engineered® design and are warranted to offer the best performance available to inverter duty applications.

E-Plus®3 motors offer even heartier energy-efficient performance and savings, exceeding most utility conservation initiatives, in addition to meeting the 1997 EPACT standards. All E-Plus®3 motors are Speed Engineered® rated for compatible inverter duty applications.

Both E-Plus® and E-Plus®3 are available in a variety of application configurations including: variable or constant torque loads, PWM, sensorless or sensored vector and with limited or broad speed ranges.

Speed Engineered® motors are rated for 4:1 speed ratio at constant torque or 6:1 at variable torque.

Three Phase ODP Motors

Features:

- Ball Bearings
- Class A or B Insulation (as noted)
- Continuous Duty
- Driproof
- NEMA Service Factor
- Squirrel Cage
- Energy Efficient \$
- NEMA Design B
- Standard, EPAct (E+) CC001A (E-Plus®) and Premium (E-Plus® 3) Efficiency
- 1/4 thru 400 HP
- 40°C Ambient
- 60 Hz
- 3600, 1800 and 1200 RPM
- E-Plus® Motors meet the requirements of the Energy Policy Act of 1992. E-Plus® 3 motors exceed the requirements of the Energy Policy Act of 1992. **E+3(NP) is NEMA Premium Efficient.**

E100

Applications:

Pumps, fans, compressors, conveyors.

Motors specially designed, tested and warranted to be **Corona-Free** for compatible inverter duty are marked on this page with a **●**. See page 1-3 of this catalog for more Speed Engineered® information.

Three Phase ODP Motors

Continued from previous page

Features:

- Ball Bearings
- Class F Insulation
- Continuous Duty
- Energy Efficient \$
- Driproof
- NEMA Design B
- Rigid Base
- Squirrel Cage
- Standard, EPAct (EE) CC001A (E-Plus®) and Premium (E-Plus® 3) Efficiency
- 1/4 thru 400 HP
- 1.15 Service Factor
- 40°C Ambient
- 60 Hz
- 3600, 1800 and 1200 RPM

- E-Plus® Motors meet the requirements of the Energy Policy Act of 1992. E-Plus® 3 motors exceed the requirements of the Energy Policy Act of 1992. **E+3(NP)** is NEMA Premium Efficient.

E408

Applications:

Pumps, fans, compressors, conveyors.

Motors specially designed, tested and warranted to be **Corona-Free** for compatible inverter duty are marked on this page with a . See page 1-3 of this catalog for more Speed Engineered® information.

Published efficiency on tri-voltage rated motors applies at 230/460 volts.
Performance at 200 or 208 volts may not be in accordance with NEMA standards.
Published efficiency on 200-208 volt motors applies at 200 volts.

Features:

- Ball Bearings
- Class B or F Insulation (as noted)
- Continuous Duty
- Energy Efficient \$
- Driproof
- NEMA Design B, unless noted
- Rigid Base
- Squirrel Cage
- Standard, EPAct (E-Plus®) and Premium (E-Plus® 3) Efficiency
- 1/4 thru 400 HP
- 1.15 Service Factor
- 40°C Ambient
- 60 Hz
- 3600, 1800 and 1200 RPM
- E-Plus® Motors meet the requirements of the Energy Policy Act of 1992. E-Plus® 3 motors exceed the requirements of the Energy Policy Act of 1992. **E+3(NP) is NEMA Premium Efficient.**

E771

Applications: Pumps, fans, compressors, conveyors.

- Energy Efficient \$
- 1/4 thru 400 HP
- NEMA Design B
- 1.15 Service Factor
- No Protector
- 40°C Ambient
- Rigid Base
- 56 Frame and larger
- Squirrel Cage
- 60 Hz
- 3600, 1800 and 1200 RPM
- E-Plus® Motors meet the requirements of the Energy Policy Act of 1992. E-Plus® 3 motors exceed the requirements of the Energy Policy Act of 1992. **E+3(NP) is NEMA Premium Efficient.**

Applications:

Pumps, fans, compressors, conveyors, machine tools, designed to stand up to abusive treatment..moist, dirty, dusty and factory applications.

Notes:

1. Item to be discontinued when stock is depleted

8. NEMA Design A

11. C flange kit available

23. Suitable for 200/400 Volt and 50 HZ

15. 56 HZ = 7/8" x 2-5/16" shaft

19. C & D Flange kit available

361. 9 leads

363. Double shielded bearings with no regreasing provisions

365. 3 leads

Published efficiency on tri-voltage rated motors applies at 230/460 volts.

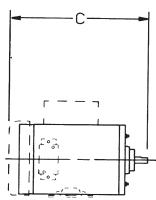

Performance at 200 or 208 volts may not be in accordance with NEMA standards.

Published efficiency on 200-208 volt motors applies at 200 volts.

Continued on next page

Motors specially designed, tested and warranted to be **Corona-Free** for compatible inverter duty are marked on this page with a (e). See page 1-3 of this catalog for more Speed Engineered® information.

Features:

- Ball Bearings
- Standard, EPAct (E-Plus®) and Premium (E-Plus® 3) Efficiency
- Class B or F Insulation (as noted)
- Continuous Duty
- Energy Efficient \$
- NEMA Design B
- No Protector
- Rigid Base
- Squirrel Cage
- Totally Enclosed
- 1/4 thru 400 HP
- 1.15 Service Factor
- 40°C Ambient
- 56 Frame and larger
- 60 Hz
- 3600, 1800 and 1200 RPM
- E-Plus® Motors meet the requirements of the Energy Policy Act of 1992. E-Plus® 3 motors exceed the requirements of the Energy Policy Act of 1992. **E+3(NP) is NEMA Premium Efficient.**

E125

Applications:

Pumps, fans, compressors, conveyors, machine tools, designed to stand up to abusive treatment..moist, dirty, dusty and factory applications.

Motors specially designed, tested and warranted to be **Corona-Free** for compatible inverter duty are marked on this page with a . See page 1-3 of this catalog for more Speed Engineered® information.

Features:

- Ball Bearings
- Class F Insulation
- Continuous Duty
- Energy Efficient \$
- NEMA Design B
- Rigid Base
- Squirrel Cage
- Cast Iron
- Standard, EPAct (E-Plus®) and Premium (E-Plus® 3) Efficiency
- Totally Enclosed
- 1/4 thru 400 HP
- 1.15 Service Factor
- 40°C Ambient
- 60 Hz
- 56 Frame and larger
- 3600, 1800 and 1200 RPM
- E-Plus® Motors meet the requirements of the Energy Policy Act of 1992. E-Plus® 3 motors exceed the requirements of the Energy Policy Act of 1992. **E+3(NP) is NEMA Premium Efficient.**

**Applications:**

Pumps, fans, compressors, conveyors, machine tools, designed to stand up to abusive treatment..moist, dirty, dusty and factory applications.

Motors specially designed, tested and warranted to be **Corona-Free** for compatible inverter duty are marked on this page with a **©**. See page 1-3 of this catalog for more Speed Engineered® information.

Published efficiency on tri-voltage rated motors applies at 230/460 volts.
Performance at 200 or 208 volts may not be in accordance with NEMA standards.
Published efficiency on 200-208 volt motors applies at 200 volts.

Features:

- Ball Bearings
- Class F Insulation
- Continuous Duty
- Energy Efficient \$
- NEMA Design B
- Rigid Base
- Squirrel Cage
- Cast Iron
- Standard, EPAct (E-Plus®) and Premium (E-Plus® 3) Efficiency
- Totally Enclosed
- 1/4 thru 400 HP
- 1.15 Service Factor
- 40°C Ambient
- 60 Hz
- 56 Frame and larger
- 3600, 1800 and 1200 RPM
- E-Plus® Motors meet the requirements of the Energy Policy Act of 1992. E-Plus® 3 motors exceed the requirements of the Energy Policy Act of 1992. **E+3(NP) is NEMA Premium Efficient.**

T57012

Applications:

Pumps, fans, compressors, conveyors, machine tools, designed to stand up to abusive treatment..moist, dirty, dusty and factory applications.

Notes:

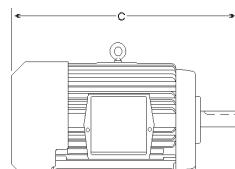

1. Item to be discontinued when stock is depleted
8. NEMA Design A
11. C flange kit available
13. Six lead motor suitable for part winding start
49. 1.0 Service Factor
65. Six lead, Wye Delta
362. 12 lead – Capability for Y Start-Delta Run
364. Open bearings with regreasing provisions
366. 6 leads

Motors specially designed, tested and warranted to be **Corona-Free** for compatible inverter duty are marked on this page with a . See page 1-3 of this catalog for more Speed Engineered® information.

Century® Industrial E-Plus®3 Nema Premium Severe Duty Motors

**Premium Efficient (EE) CC001A - Squirrel Cage - TEFC - Rigid Base - Severe Duty
Construction - 3600 - 1800 & 1200 RPM - 1 thru 50 HP - Cast Iron**

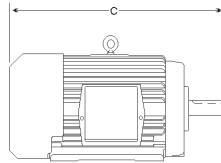

Features:

- All Cast Iron Construction
- 1.15 Service Factor
- Class F Insulation
- Continuous Duty
- 60 Hz
- Corrosion Resistant Fan
- Multiple Dips and Bakes Non Hygroscopic Varnish
- Plated Hardware
- Shielded Bearings
- Shaft Slinger
- Automatic Drain/Breather
- Fully Gasketed Conduit Box
- Stainless Steel or Bronze Nameplates
- Regreasable While Running
- Grease Fittings
- Ground Lug in Conduit Box
- 3-Year Warranty (3 years from date of manufacture, 2 years from date of installation)
- Energy Efficient \$

How to Read Date Codes on Motor Nameplates & Labels

Introduction of a new standard date code was implemented in August of 2006 that will eventually be used on all A. O. Smith product. The first three characters represent the day of the year, the next two the year, and the last two the plant code. For example, 123064M, would mean the 123rd day of 2006 (12306) manufactured in A. O. Smith's plant (4M).

A. O. Smith Product

Plant code–Month–Year. Example: 7B99. 7 is a plant code designation, B is the month (January is A, February is B, etc.) and 99 is the year.

Century®, Indiana General, Louis Allis Product

Year code–Month. Example: BA3. BA is the year (see table below). 3 is the month (1-12).

1992	BK	1998	BS	2004	BZ
1993	BL	1999	BT	2005	CA
1994	BM	2000	BU	2006	CB
1995	BN	2001	BW	2007	CC
1996	BP	2002	BX	2008	CD
1997	BR	2003	BY	2009	CE

Universal™ Product

Week (1-52), Year (Letter code from table below), Factory order number code, Plant code.

Example: 8 Z 0275592 R. 8 is the 8th week of the year, Z is the year (1988),
027592 is the factory order code, R is the plant code (Ripley).

1992	D	1998	K	2004	S
1993	E	1999	L	2005	T
1994	F	2000	M	2006	U
1995	G	2001	N	2007	V
1996	H	2002	P	2008	W
1997	J	2003	R	2009	X
